

REMARKS:

Claims 21-34 are in the case and presented for consideration.

The above-identified application has been allowed.

A clarification has been made to the specification at page 21 and to claim 30 to explain that it is a low voltage signal that is applied to the medium, rather than a "light" signal which is not correct.

In Fig. 15 and the remaining figures where the voltage generator is disclosed, this is clearly a slight or low voltage generator and not a light (elimination) generator. The correction was necessary to the specification and claim 30 to avoid confusion.

A clerical correction has also been made to claim 34. The correction suggested by the examiner has been incorporated as well and the application is still believed to be in condition for allowance since no matters touching the merits of the application are involved in view of the amendment to a dependent claim and the rectification needed.

The examiner is respectfully urged to telephone the undersigned if for any reason this amendment cannot be entered to discuss the case more fully.

Favorable action is respectfully requested.

Respectfully submitted,

A handwritten signature in black ink, appearing to read 'Peter C. Michalos', written over a horizontal line.

Peter C. Michalos
